

Te Ika-a-Māui and the whai

The four moth regions of Te Ika-a-Māui are named for parts of the whai (stingray). Colour them to match their moths and label them.

Te Ihu region is named for the snout of the stingray. **Ngā Paihau** region is named for the wings of the stingray. **Te Hiku** region is named for the tail of the stingray. This leaves **Te Tuakoko** the high elevation regions of the North Island named for the spine of the stingray.
